I am going to play renegade on-line and when I want to join a match, the game sais that I have to update. When the 18 Mb update is downloaded the game restarts and the update will be installed. At file game.exe the patch stops with an error that the file was not found or a diverent file with the same name was found. What might be the problem?[/b]

I had a problem one time where when I tried to download an update for Renegade in-game from WOL, there was a download error or something. But then I downloaded the update off of the internet, and it worked just fine...I think WOL might have cut me off or something...

Instead of talking about yourself, you could simply have said

`ftp://ftp.westwood.com/pub/renegade/updates/Renegade_1037_English.exe`

---
