I have adjusted the brenbot.cfg file and then saved it all like it says.

I then try to run brenbot.exe and it connects to the irc channel and everything.. but...

It says looking for renlogs..
Renewing wheel in 120 secs....

My renlog paths are correct as they are the same ones i used to run BR.net and that ran fine.

Can you help me in any way?

If your path has a space in it, it might cause this problem... if it's in Program Files, try PROGRA~1
instead, like: C:\PROGRA~1\Westwood\RenegadeFDS

Sounds like there just isn't a renlog for it to parse yet, or that your fds path is wrong.

dont think my paths are wrong i had BR.net and the paths worked fine.

want to see the whole of my cfg file to look at it so then you may see the error(s)

I think i had the same problem too it said 120sec....... next it closed.... as if it crashed on
me..?!?!?!?!

sorry to bump this up but i am also having the problem   my FDS path is right and has no spaces
in it (but it is rather long) and i have checked the FDS directory there are renlog files there

make sure you run the FDS *before* you start brenbot. Otherwise, there is no renlog for it to
parse.
