Hey! Quick question. I downloaded a bunch of military videos in .WMV format. I can play them in windows mediaplayer/winamp and all that good stuff. But, I cannot skip through them. I can only have it play continously. Meaning I cant go from 5 seconds into the film to say 30 minutes into the film. I was wondering if there was any players taht would allow me to, or any programs that would allow me to convert them into mpegs or whatnot so I can skip through? Thanks a bundle!

That usually happens because the video's have incomplete header information, as if the last few bytes of the file is missing.

I've never thought of looking for a cure apart from downloading the original files once again, which 90% of the time cures the problem.
