Thats right! we now have 2 more servers, another 24 player(BCServ3) and a 32 player(BCServ5). Like all other BCServs, these will be running the DragonServ admin system and vloknboky's scripts.dll mods.
Our 2 24 player servers are hosted on a 3GHz P4 box with HT, while the 32 player is on a 2.4 P4 box. Both from good old Servermatrix.

Majiin Vegetasweet news.. so many servers now with good pings.. i cant play on them all

I know the pings of the better servers are great and with more all the time it's hard to choose where to play next. I like the fact that there are almost more larger servers now then there has been for a long time...

HT = Hyper Threading Technology

As far as I know, it doesn't really bring any significant benefits with most programs.

Allows "real" Multi-Tasking apparently. When you multi-task normally, the CPU is in fact processing info from one program then the other really fast you don't notice. HT is meant to allow the processor to do 2 things at once or something like that.

Just part of the array of confusing names for new technology like MMX and 3DNOW are.

Hyper-Threading Technology provides thread-level-parallelism (TLP) on each processor resulting in increased utilization of processor execution resources. As a result, resource utilization yields higher processing throughput. Hyper-Threading Technology is a form of simultaneous multi-threading technology (SMT) where multiple threads of software applications can be run simultaneously on one processor. This is achieved by duplicating the architectural state on each processor, while sharing one set of processor execution resources. Hyper-Threading Technology also delivers faster response times for multi-tasking workload environments. By allowing the processor to use on-die resources that would otherwise have been idle, Hyper-Threading

Technology provides a performance boost on multi-threading and multi-tasking operations for the

Which means that Renegade doesn't benefit from it... it's one task.

butbrenbot and the kills could work alot better
as that would be the second task O_O

I remember recently Dell was advertising a computer that could watch a DVD, burn a CD, share music, surf the net and play a game, all at the same time. They went on to say that the computer can "work without interrupts" I find this impossible, even with HT technology (and a cdRW/DVD drive)

Thats a stupid claim, as its all but impossible to play a game and watch a DVD at the same time. Although I have never tried that exact sequence, Im sure pretty much any decent computer these days could do that. I know I have burned a CD while playing a game and also downloading at 300KB/s at the same time as playing mp3s.

You always get n00bs who cant play as a team. Not just in the black cell servers.

TwizdidYou always get n00bs who cant play as a team. Not just in the black cell servers.

Yeah, I've had the game since it's realease. I know that. But it's still funny that people still think Renegade is a regular FPS.
