I have just got a movie in a weird unsupported format and converted it to 200 seperate high quality jpeg files...

I wan't to turn these files into a swf...

Have you got any ideas on how to turn it in to a swf.

There is also a program called Swish that I've used. It's much more user friendly and much much cheaper. There are some higher end features Flash has that Swish does not , but for a beginner, Swish is the way to go. I work with a lot of Flash and I do have to warn you. After importing 200 High quality Images, the .swf file might be big. They get compressed to about 20% of there original size.

Check this link out <http://www.swishzone.com/>

No I was wondering if there was a application that could just automatically compile all the images in to a swf...

I have seen 1 but it was extremely pricey.
