It's gonna be in Celcius, 27 degrees Fahrenheit is like -3 degrees Celcius. Unless you live in an ice cave then the ambient room temperature is going to warm the liquid up to around 22 degrees Celcius before even going through the CPU.

Google is more powerful than you think - search for "27 degrees celsius in fahrenheit" (without the quotes).

Leave the Italian alone!

Dont mess with Italians! !

Haha jk, but cool with the overclocking

No four years. same person that bumped this one.  
it's the kkk sponsoring a road that turned into a gay bashing thread.

K is Kelvin, but...

Quote:

27 kelvin = -246.15 degrees Celsius

Yeah, right...

---

It is Kelvin. Or K for short

---

0 Degrees Celsius + 273 Degrees I believe? Its another kinetic energy scale.

For example, room temperature is about 295 K.
