Hey guys, finally got some pics up of my new setup, here are some good ones.

Stats:

Dell Dimension 8100 (the one on the right):

This is my programming machine.

P4 1.3ghz

1.5g RDRam

AGP GeForce 2 MX 400

PCI GeForce 2 MX 400

200gigs HD

16x DVD-Rom

24x CDR

Custom Built (on the left):

This is my gaming machine.

Scorpio Case

P4 3.2ghz

2gig DDR 3200

90g HD

Radeon 9800 xt

52x CD-Rom

Dual 17" monitors, setup so the gaming machine is KVMd to the left monitor, while the right monitor stays on the right machine dedicated (great for running a voice chat & stuff while playing). Keyboard & Mouse 1 (red glowing one) setup on KVM, blue mouse stays on right computer for constant mouse control to right machine. Can surf the net while waiting for game progress.

Microsoft Media keyboard

GE optical mouse (red) although it was a target special, its a great mouse, 5 buttons and 2 scroll wheels.

Some off name optical mouse (blue), works, and has a blue led built in.

LinkSys Wireless Router, these two comps are hardwired, but one of my roomates has a wireless connection from the dining room, and i have a media station setup up stairs in my bedroom with a

wireless connection as well.

Midiland 2.1 Speaker System, awesome speaker system that really punches out the sound. We use my programming computer when im not punching code out as a stereo for our mp3's, annoys the neighbors quite well...

Well, thats my system... More later, as i am going to start modding out the left system more, as well as dropping in a 5" lcd s-video monitor into the front panel (behind the door, or flip-out from the top, still haven't decided).

Nice boxes.

Me, I have only one computer.

Intel motherboard of some kind (dont know what model)

Intel Pentium 4 CPU 2.40GHz (runs everything I throw at it)

512mb RAM

40gb hard disk (although now that I have a broadband connection and I am downloading so much crap, mabie I need more disk space... Or mabie I just need more blank CDs to burn whatever crap

I dont need right now onto

NVIDIA GeForce4 MX 440

LiteOn 32x12x40x CD recorder (I haver no need for a DVD driver, if I wanted one for watching video DVDs, I would buy a proper DVD player and there arent that many data DVDs that arent also available on CD)

1.44 mb floppy (although its broken last I checked unfortunately)

Standard keyboard (the kind with the Windows Keys on it)

Microsoft USB IntelliMouse Optical (Mice are about the only thing Microsoft makes thats good)

OzStick single arcade stick (for all the retro arcade games, it may also help with my Tony Hawk Pro Skater scores)

Logitech MOMO Racing Force Feedback Wheel (that I still havent bothered to take out of the box and play with yet)

17 Inch CRT (I wouldnt mind a 17 Inch LCD but they are still so expensive that its not worth it)

on-motherboard 10/100 LAN connection for connecting to LANs (e.g. at LAN parties)

802.11b Wireless LAN connection to connect to our AP (which then connects to the 512k DSL connection)

TV tuner card (currently non-working) that lets you watch TV on your PC

Creative Vibra 128 Sound Card

a set of DKL speakers + subwoofer.

/me wonders if he can count his MD-981 MIDI keyboard as a "computer item"... (well it does plug into the computer...)

---

/me hops on the bandwagon.

AMD Athlon XP 2400+  
1024 MB PC-2700 DDR RAM  
GeForce4 Ti4800SE  
19 inch Viewsonic VG-191 LCD Monitor

100GB HD  
40GB HD  
8x DVD player (the ownage, I know :rolleyes:)

And Blazer bought all of those things for me.

I also lease two servers for Renegade:

Server 1:  
Dual 2.4 ghz Xeon processors  
1024 MB RAM  
80GB HD  
40GB HD  
(Runs n00bsvr02 (aka Crimson79) - n00bsvr06)

Server 2:  
Pentium 4 - 2.8 ghz  
1024 MB RAM  
80GB HD  
(Runs n00bsvr01 and n00bsvr08)

Server 3: (will be decommissioned any minute now since I stopped paying and they stopped charging at the end of February)

Celeron 2.4 ghz  
512 MB RAM  
40GB HD  
(Runs n00bsvr07, used to be n00bsvr01)  
(This box sucks)

And that doesn't count the other computers at the house... Blazer and I both have IBM T30 laptops from work, We have a computer in the living room for general usage and another in the office (so we can have up for 4 people playing Renegade not counting the laptops)... we have a Cisco router connected to a 24-port Cisco switch managing the home network. There's also another shitty 8-port switch on the other side of the office, and another 8-port switch on top of the TV to connect our Replay TV and XBox to the internet, plus you can use your laptop in front of the TV and connect it to that switch, or just connect to our Linksys wireless AP.

Basically, we are geeks and proud of it.

Well, I guess I could post the specs of my desktop and laptop.

Desktop:

AMD Athlon XP 2100+ (1.73 GHz)

1024 MB DDR 2700 RAM

30 GB HD - For Windows. I now have a redundant 120 GB SATA drive because my Asus A78NX Delux is a hunk of shite with it's shit SATA controller that causes corruption problems.

80 GB HD - For storing all my files, MP3s and all the crap downloaded from the net.

Radeon 9700 Pro 128 MB - Nice and fast, but seems to fuck up when I play the Far Cry demo.

Sound Blaster Live - Can't remeber anything else about it, also have an on-board soundcard.

TV Card

IDE Exspansion card

CD/RW 52x/48x/52x

DVD-ROM 16x/40x

CD-ROM 56x

Laptop

AMD Athlon 2400+ XP-M

256 MB DDR 266 - Really need another stick of 256 MB.

30 GB HD

ATI Mobile graphics thing - Uses shared memory.

CD-RW/DVD Combo drive - Not sure of the speed.

I just picked up a Scorpio case for a computer fair. They had it on display and it looked great, I

case considering it includes a 420W PSU (2 fans), 3 case fans and front audio/usb/firewire.

I plugged it in, without any components hooked up and you can barely hear it with all 5 fans running. The Blue LED fan on the side looks cool. I was thinking of going for the silver version but the black looks much better.

AMD Athlon XP 2400+  
512MB DDR RAM [ all I need right now ]  
GeforceFX 5600+  
17" TTX Monitor (standard and getting freaking old...Even the colors are starting to fade and it's too dark)  
120GB HD Western Digital  
20GB HD Fujitsu (Don't trust it...Going to use it as a backup HD)  
52x CD Player (LG)  
8x DVD Player (Sony)  
Windows XP Professional  
(Ethernet) Realtek RTL8139 Family PCI Fast Ethernet NIC (100Mb/s) 160.43MB In, 8.59MB Out)  
(Probably getting a better one later, didn't care much about LAN cards when I bought it...They don't really affect my connection...I have High speed cable, which is about 3x faster than basic cable...But since it's used by many users it's like basic cable)  
Soundcard is built-in my motherboard, it's pretty good.

I'll be buying a new case soon. The one I have right now is p00.

The green one is pretty cool if you can find a retailer selling it. I picked up the black one as I think that it looks great with the blue LED fan lighting up the components.

I've still got a CoolMod LED from a Volcano 9 system I built that had no window, I am thinking of putting it on my Volcano 11 as it will look great. The LED's are wired up to the power and hdd connectors, so they flash when your using it.

The front of the Scorpio lights up in the center with blue LED's when it on and there are two bits that flash for hdd activity each side of the middle bit. I will probably need to mod the hdd connector with a transistor so I don't draw too much current from the motherboard and blow it up.

I bet that I have the worst computer on these forums!!!! And I bet that pretty much no one can beat me!!

Pentium III 733

128 MB SDRAM

Nvidia TNT/pro...

...and I am very poor to upgrade, so if anyone has some spare video card(better than the one I have of course), or a spare SDRAM chip(or what is it called), I wouldn't mind if you could send it to me

I will post picture of my peace of s\*\*t later.
