How do I add my own music files into my maps. I know I would temp them under the sound tab, but it doesnt work. I name them then go to the settings tab and change the filename, but it doesnt change. And when I make the sound, it says unable to find sound down at the bottom.

Make a sound emitter, and place your music on it, change the settings, to drop off at like 2000, it should cover your whole map. Set the loop to 0 i think for continuos
