Here you can get the new version of the SQL lite manager to help edit your brenbot.dat database:

<http://sqlabs.net/index.shtml?sqlitemanager>

-SNIPESMO, DO not reply to this post, I'm sure you have some crap to say, but I keep telling you are ignored by me and I don't want you pollution in my threads.

I do believe you mean "your pollution". Also, I had no intent of posting in a thread like this, but since you were kind enough to mention me I figured I would stop in.

Thanks for this utility Alkaline, I was trying to remove some false \n00b commands and it kept giving me a nice expired message.

It's easy!

Install it, then click load, and load brenbot.dat - then go to ther "Manage" tab. Then enter into the field what filters you want and click "Query". Entering nothing into the field will give you the whole list

Nightma14

B) where is this load your talking about

In your brenbot folder.

[View Forum Message](#) <> [Reply to Message](#)

This should clear it up..

1. Launch the app and click open...
 2. Browse to your brenbot folder and select brenbot.dat (may also be name just brenbot)
 3. Go to the second tab, from there you can manage the database.

<http://www.sqllabs.net/download/SQLiteManagerSetup.exe>

Download that, install it, and it should appear with a shortcut on your desktop.

it only shows 50 maxs records

somebody was supposed to be given 20 n00b reports for abuse of the command

they only got 11 due to this 50 limit
