go in to renegade folder, see if you have game.exe and game2.exe. If and only if you do delete game.exe, then rename game2.exe to game.exe and try to reinstall RenGuard then. If you want to be 100% sure you don't delete the real renegade (game file) you can run game.exe and then game2.exe. game.exe sould start renguard, game2.exe sould start renegade.

Safest way is go into Control Panel, then Add/Remove Programs & then remove RenGuard there,

then re-download it and install
