Mind you this is with the one time I had it happen to me.

Booting up Renguard caused a bit of a hang while it was trying to connect. The hang this time was a little more than usual, but I had connected and went to join a game.

(@n00bsvr01) Host: [warranto] You need RenGuard to play on this server. Download it from <http://www.renguard.com>.

(@n00bsvr01) Host: [warranto] You need RenGuard to play on this server. Download it from <http://www.renguard.com>.

(@n00bsvr01) Host: [BR] warranto is being kicked by RenGuard for: You need RenGuard to play on this server.

(@n00bsvr01) Player warranto left the game

(@n00bsvr01) warranto was kicked

I quit Renguard and reloaded it. The "hang time" was normal, and I was able to play fine.

I think the problem may be that despite it showing you have connected, the hanging when you load it may infact be you NOT connecting to the network, despite the affermative reply you get from the client.

warranto is right--it does the trick for me; it fixes fps drops as well as the server's failure to recognize my RG.
