Hello

My problem happens when I attempt to load Renegade or to join a game in gamespy. What happens is the renguard program loads but it stays as a white screen. When I do CTRL + ALT + Delete it says that the program is not responding. I have tried just leaving it and nothing happens. I have tried reinstalling it and it works once or twice then the problem reoccurs again. I have also tried the backwards compatibility wizard and it still has the error.

Please help

For the record I am running Windows XP

Thank you

Osiris

Any firewalls that could possibly block RenGuards connections to the internet?

(And just a quick note: WOL owns GSA)

Hello

I have just tried disabling my firewall and loading renegade. The problem is still there
