When i want to join my own server i still get te error that i don't have renguard running, but i have it running :S. And i also installed BRenbot 1.34. Is this erro being fixed in Renguard 1.01 Release, or can i just don't join my own server??

You are probably connecting to your server though your LAN, ie the server is on your home network. RenGuard does not work on your local lan. This is noted in the SSC readme.

Put your username(s) into ssc_ignore.txt, this will get RenGuard to ignore your usernames so that you can play on your own servers.

Any chance of a later version fixing that?

Impossible. You need to have a public ip address in player_info. It needs to be the same as the IP you used to connect to the RG network..

If it doesn't match, RG can't verify you are actually online..
