I have found that the mouse control prgram has been blocked with rengaurd. I didn't know if you have noticed it or not. I use the mx500 logitech, and used to use the mouseware with it. All the program does is let me program the buttons on the mouse. When I has it installed and tried to play renegade the mouse settings would be restet like i haven't made any type of ajustment, so I would have to redo the mouse sensitivity. O.K. well did that and then i found that it would do it everytime i started rengaurd. this is what i did to find out . i uninstalled rengaurd and the mouse worked fine. reinstalled rengaurd then the mouse didn't work right in the game again the settings changed. then i uninstalled the mouseware and the mouse worked fine again.

O.k. now here is the question. can that be fixed becasue i use the mouseware to program the buttons on the mouse for other programs that i use. Oh 1 more thing i know someone else that uses a logitech mouse with the same results. thank you for your time.
